

Trần Huy Toàn

Fresher Backend Developer

📞 0966315141 ✉️ tranhuytoan1611@gmail.com 🔗 <https://github.com/tranhuytoan161104> 📍 Hà Nội 📅 16/11/2004

INTRODUCTION

Backend Developer proficient in ASP.NET Core and Java Spring Boot, backed by 6 months of enterprise internship experience. Strong foundation in OOP, database design, and RESTful APIs, with hands-on practice in database concurrency, caching, and message queues. Seeking a Fresher .NET Backend Developer role to deliver maintainable, high-performance services and contribute to engineering teams.

EDUCATION

FPT University 10/2022 – 9/2026

Software Engineering

- Spearheaded major academic projects as Team Leader, overseeing task allocation, code quality, and timely delivery.
- Completed rigorous coursework in Data Structures and Algorithms, Enterprise Web Applications, and Software Architecture and Design.

SKILLS

Programming Languages	Java, C#, SQL
Backend Frameworks	Java Spring Boot, ASP.NET Core
Database Management System	PostgreSQL, SQL Server, Redis
DevOps	Docker, Azure

EXPERIENCES

FPT Information System 9/2025 – 3/2026

Software Engineer Intern

- Contributed to enterprise applications using Java Spring Boot for backend.
- Mentored by senior engineers in the practical implementation of Docker and CI/CD pipelines within Azure environments.
- Participated in the full Software Development Lifecycle, adhering to professional coding standards and Agile methodologies.
- Gained opportunity to explore the codebase of an enterprise system by tracing API request flows through layers of code, obtaining a practical understanding of enterprise-grade Spring Boot project structures.

PROJECTS

Primary School Operation System - Group Capstone Project 2025 – 2026

Backend Developer

Repository: https://github.com/TranMaiQuy/SEP490_G32.git

- Tech stack: React.js, .NET 8 (ASP.NET Core), and SQL Server.
- Architected and developed a secure, scalable backend using ASP.NET Core to serve RESTful APIs.
- Implemented user authentication and authorization using JWT.
- Built a dynamic and responsive frontend using React.js to create an interactive user interface.

Slot Reservation System - Personal Project 2026

Backend Developer

Repository: <https://github.com/tranhuytoan161104/BurstSlot.git>

- Tech stack: Java Spring Boot, PostgreSQL, Redis, Apache Kafka, Docker.
- Resolved lost update and overselling race conditions using Atomic SQL Updates in PostgreSQL.
- Prevented connection pool exhaustion via a Redis to proactively handle traffic spikes.
- Eliminated dual-write anomalies during system crashes using the Transactional Outbox Pattern and Apache Kafka.

Disclaimer: This project employs an enterprise-level stack only to study and do hand-on practice complex system challenges (e.g high-concurrency handling, fault tolerance, and data integrity), rather than broad features development or show off tech-stack.
